                                                               Nature 390:580-586(1997).

-!- CATALYTY: ACTIVITY: D-glyceraldehyde 3-phosphate + pho-
-!- NAD(+) = 3-phospho-D-glyceroyl phosphate + NADH.
-!- PATHWAY: Second phase of glycolysis; first step.
-!- SUBGINIT: Homotetramer (By similarity).
-!- SUBGINIT: Belongs to the glyceraldehyde 3-phosphate dehydrogenase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        58.1%; Score 36; DB 1; Length 335; 60.0%; Pred. Treatment of human tumors, using a combination of radiation and a non-radiolabeled protein receptor tyrosine kinase inhibitor.

Disclosure, Page 15; 31pp; English.

This sequence is the hypervariable region CDR3 (complementarity determining region 3) of the heavy chain of a single chain antibody derived from the murine antibody 225. The invention relates to a method for inhibiting the growth of tumours in human patients by traating with an effective amount of a combination of radiation and a non-radiolabelled protein receptor tyrosine kinase (PRTK) inhibitor, the overexpression of which can lead to tumoursigenesis. The method can be used in the treatment of tumours of e.g. breast, lung, colon, kidney, bladder, head and neck, ovary, prostate or brain. The administration of a suitable antibody to

The method involves treating the patient with a combination of BGFR/human EGF-1 (HER1) antagonist, optionally with a chemctherapeutic agent or radiation. The antagonist can BGFR/HRR1 artagonist anti-EGFR monoclonal antibody, C225. The BGFR/HRR1 is useful for inhibiting the growth of refractory tumours such as tumours of breast, heart, lung, small intestine, colon, spine, bone marrow, blood, thymus, uterus, testicles, cervix and liver, preferably squamous cell carcinomas. The present sequence region 3 amino acid sequence of the chimeric anti-EGFR monoclonal antibody C225 which is used in an example illustrating the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Epidermal growth factor receptor/human epidermal growth factor receptor-1 antagonist for inhibiting the growth of refractory tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Refractory tumour growth inhibition; epidermal growth factor receptor; EGFR antagonist; cancer; squamous cell carcinoma; anti-EGFR antibody; complementarity determining region; CDR.

The method involves administering an antibody or a defective receptor that is an antagonist of a member of the EGF receptor family, or a combination of the rantagonist and photocherapy, chemotherapentic agent or radiation therapy. The attibody used in the method of the invention acts as an epidermal growth factor receptor (EGFR) antagonist by inhibiting EGFR /HERI phosphorylation. The method of the invention is useful for treating a mammal with hyperproliferative disease such as psoriasis, actinic keratoses, sebornheic keratoses, warts, keloid scars and eczema simulated by a ligand of a member of the EGF family of receptor. This sequence represents the mutine anti-EGF 255 antibody heavy chain (VH) hypervariable region (CDR3) used as an inhibitor of EGFR in the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Treating a mammal with hyperproliferative disease especially psoriasis, stimulated by ligand of member of epidermal growth factor family of receptors, by administering antagonist of the receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
Mouse; heavy chain; antibody; hyperproliferative disease; epidermal growth factor; EGF; psoriasis; actinic keratosis; seborrheic keratosis; warts; keloid scars; eczema; 255 antibody; hypervariable region; CDR3; EGFR inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ·

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is the heavy chain variable region of the reshaped human monoclonal antibody (MAb) H325, 225RHO. The MAb is specific for the human motoclonal antibody (MAb) H325, 255RHO. The MAb, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage by posteatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   - nseq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Chimeric and humanised versions of anti-EGF receptor antibody 225 for inhibiting tumour growth, esp. of late stage prostatic tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Saldanha JW;

The MAb is specific for the human monoclonal antibody (MAb) H225, 225RA. The MAb, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Chimeric and humanised versions of anti-EGF receptor antibody 225 - used for inhibiting tumour growth, esp. of late stage prostatic tumour.

```
The present sequence is the heavy chain variable region of the reshaped human monoclonal antibody (MAD) H225, 225RHB. The MAD is specific for the human epidermal growth factor (EGF) receptor. The MAD, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Chimeric and humanised versions of anti-EGF receptor antibody 225 for inhibiting tumour growth, esp. of late stage prostatic tumour.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is the heavy chain variable region of the reshaped human monoclonal antibody (MAb) H255, 225HC. The MAb is specific for the human epidermal growth factor (EGF) receptor. The MAb, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor

The MAD is specific for the human epidermal growth factor (EGF) receptor. The MAD, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or displatin, or a signal transduction, ras or cell cycle inhibitor

The present sequence is the heavy chain variable region of the reshaped human monoclonal antibody (MAb) H255, 225RHA. The MAb is specific for the human epidermal growth factor (EGF) receptor. The MAb, or a fragment, can be used to inhibit the growth of tunnour cells, especially late stage prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Heavy chain, murine; mouse; monoclonal; antibody; C225; human; epidermal growth factor; EGF; receptor; inhibition; growth; tumour; cell; late stage; prostatic; prostate; variable region; chimeric.

The present sequence is the heavy chain variable region of the murine monoclonal antibody (MAD) M225, which is specific for the human epidermal growth factor (EGF) receptor. The MAD, or a fragment, can be used to timbibt the growth of tumour cells, especially late stage prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor. (Updated on 27-AVG-2003 to correct OS field.)
           Chimeric and humanised versions of anti-EGF receptor antibody 225 - used for inhibiting tumour growth, esp. of late stage prostatic tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Bivalent fusion proteins that bind epidermal growth factor receptor or analogues - and comprise at least two different cell surface binding domain(s), useful for tumour therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Single chain antibody; scFv; monoclonal antibody; MAD; EGF; epidermal growth factor; receptor; antitumour; cancer; therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is the heavy chain variable region of the chimeric monoclonal antibody (MAD) C225, which is specific for the human epidermal growth factor (EGF) receptor. The MAD, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, rass or cell cycle inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Heavy chain; murine; mouse; monoclonal; antibody; M225; human; epidermal growth factor; EGF; receptor; inhibition; growth; tumour; cell; late stage; prostatic; prostate; variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Chimeric and humanised versions of anti-EGF receptor antibody 225 - used for inhibiting tumour growth, esp. of late stage prostatic tumour.

scFv(225) (AAW05133) comprises the single-chain binding region of murine monoclonal antibody 225, which is specific for the human epidermal growth factor receptor. It is encoded by plasmid pWW152-225 (see also AAT42033), constructed by cloning MAD 225 will and VI region cDNAs into plasmid pWW152. Novel bivalent proteins (see also AAW05134-44), some of them including scFv(225) and an effector e.g. cytotoxin, can be produced in bacterial host cells, and are useful as antitumour agents
                                                                                                                                                                                                                                                                                                                                                                          Single chain antibody, scPv; monoclonal antibody; MAb; EGF; epidermal growth factor; receptor; plasmid pSW202-225; cancer; therapy; antitumour; exotoxin A; ETA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Bivalent fusion proteins that bind epidermal growth factor receptor or analogues - and comprise at least two different cell surface binding domain(s), useful for tumour therapy.

        scFv(225)-ETA (AAW05135) comprises the single-chain binding region (see also AAW05133) of murine monoclonal antibody 225, which is specific for human epidermal growth factor receptor, joined to exotoxin A (ETA). It is encoded by plasmid pSW202-225 (see also AAT42035) obtd. by ligating an scFv(225) gene (AAY42033) into plasmid pSW200 contg. the Pseudomonas acruginosa PAK ETA gene. The construct can be used to produce novel bivalent fusion proteins (see also AAW05136-44) in bacterial host cells, for use as antitumour agents
                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                            ô
                                                                                                          scFv2(225/FRP5)-ETA (AAW05140) comprises the single-chain binding region of murine monoclonal antibody 225 (specific for human epidermal growth factor receptor, see also AAW0513) Joined to portions of exocorin A from Pseudomonas aeruginosa and to the single-chain binding region of murine monoclonal antibody FRP5 (specific for human epidermal growth factor receptor erbB-2, see also AAW05134). It is encoded by plasmid pMS238-225-5 (AAT42040). This plasmid can be utilised in the prodn. of the bivalent protein in bacterial (sep. B. coli) host cells. Such fusion proteins (see also AAW05138-44) are useful as antitumour agents
                                                 Bivalent fusion proteins that bind epidermal growth factor receptor or analogues - and comprise at least two different cell surface binding domain(s), useful for tumour therapy.
                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                      Single chain antibody; scFv; monoclonal antibody; MAb; EGF; erbB-2; epidermal growth factor; receptor; plasmid pMS238-5-225; cancer; exotoxin A; ETA; antitumour.

of murine monoclonal antibody FRP5 (specific for human epidermal growth actor receptor erbB-2, see also AAW05134) joined to portions of exotoxin A from Pseudomonas aeruginosa and to the single-chain binding region of murine monoclonal antibody 225 (specific for human epidermal growth factor receptor, see also AAW05133). It is encoded by plasmid pMS228-5-225 (AAT42039). This plasmid can be utilised in the prodn of the bivalent fusion protein in bacterial (sep. E. coli) host cells. Such fusion proteins (see also AAW05138-44) are useful as antitumour agents
                                                                                                                                                                                                                                                                                                                                                                    Bivalent fusion proteins that bind epidermal growth factor receptor or analogues - and comprise at least two different cell surface binding domain(s), useful for tumour therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                 PTM: Proteolytically cleaved by caspases during apoptosis. Cleaved efficiently at Asp-123 by caspase-6 and granzyme B. Cleaved with approximately 10-fold less efficiency at Asp-109 by caspase-3 and caspase-7 (By similarity).

MISCELLANBOUS: In strain C57BL/Ola, an 85-kb region on chromosome 4 containing Numat and Ube4b is triplicated. Ube4b becomes linked to Numat and encodes a fusion protein located in the nucleus which is responsible for the delayed Wallerian degeneration of injured
FUNCTION: Binds to the ubiquitin moieties of preformed conjugates and catalyzes ubiquitin chain assembly in conjunction with E1, E2, and E3 (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        axons in CS7BL/Ola.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  R MGD; MGI:1927034; UD64b.

Note=No experimental confirmation available;
TISSUE SPECIFICITY: Highest expression in ovary, testis, heart and skeletal muscle. Expression is low in colon, thymus and peripheral blood leukocytes. Almost undetectable in lung and spleen.
PTM: Proteolytically cleaved by caspases during apoptosis. Cleaved efficiently at Asp-123 by caspases during apoptosis. Cleaved efficiently at Asp-123 by caspases and granzyme B. Cleaved with approximately 10-fold less efficiency at Asp-109 by caspase-3 and
FUNCTION: Binds to the ubiquitin moleties of preformed conjugates and catalyzes ubiquitin chain assembly in conjunction with E1, E2, and E3 (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       D->A: ABOLITION OF CLEAVAGE BY CASPASE-6.

Nayatoloi deukemia cells. Regulation during differentiation and identity with cathepsin G.";

Bur. J. Blochen. 205:1947-994 (1922).

-I. FUNCTION: This vienentin-specific protease may regulate the reorganization of vienetin filaments; occurring during cell differentiation, movement and mitosis.

-I. CATALYTIC ACTIVITY: Specificity similar to chymotrypsin C.

-I. SUBCELLULAR LOCATION: STRONGIY ASSOCIATED WITH MEMBRANES.

-I. SIMILARITY: Belongs to peptidase family S1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Mus musculus (Mouse).
